

🚩 Flag 0 – Create Your Feature Branch

Objective: Create a feature branch before modifying your application. Name the branch feature/widgets

Screenshot:

- Terminal showing feature/widgets

A screenshot of a Windows terminal window titled "MINGW64:/c/Users/student/Desktop/my_first_flutter_app". The terminal shows the following commands and output:

```
bash: /c/Users/student/.bashrc: line 2: unexpected EOF while looking for matching `''  
student@PC-12 MINGW64 ~  
$ cd ~/Desktop/my_first_flutter_app  
  
student@PC-12 MINGW64 ~/Desktop/my_first_flutter_app (main)  
$ git checkout -b feature/widgets  
Switched to a new branch 'feature/widgets'  
  
student@PC-12 MINGW64 ~/Desktop/my_first_flutter_app (feature/widgets)  
$
```

🚩 Flag 1 – Break It Apart

Objective: Separate your profile information into individual `Text` widgets.

If your card currently looks like this:

`Text(`

`'Chiara Marie C. Canque\n'`

`'BSIT - 3\n'`

`'My First Flutter Application\n'`

'August 11, 2026',
)

Your task: Separate each piece of information into its own `Text` widget.

You should have something conceptually like:

Text → Name

Text → Course & Section

Text → Application Title

Text → Date

Do not worry about making it pretty yet.

Screenshot:

- Your code showing the separate `Text` widgets

```
Text('Zelon Matthew C. Estimo'),  
Text('BSIT - 3'),  
Text('My First Flutter Application'),  
Text('August 11, 2026'),
```

Your application

🚩 Flag 2 – Stack the Information

Objective: Arrange your individual `Text` widgets vertically.

Research how to use:

`Column()`

Place your information inside the `Column`.

Your card should now have:

Name

Course & Section

Application Title

Date

Screenshot:

- The `Column` in your code

```
child: Column(  
  children: [  
    // Name  
    Text('Zelon Matthew C. Estimo'),  
    // Course & Section  
    Text('BSIT - 3'),  
    // Application Title  
    Text('My First Flutter Application'),  
    // Date  
    Text('August 13, 2026'),  
  ],  
, // Column
```

- The four separate pieces of information displayed vertically

🚩 Flag 3 – Add Another Element

Objective: Add another individual widget to your `Column`.

Add something that belongs to your profile.

Examples:

Hobby

It must be its **own widget**, not additional text inside another `Text`.

Screenshot:

- New widget in your `Column`

```
Type: List<Widget> 5'),  
Text('Hobby: Art & Design 🧑‍🎨 '),
```

Updated application

🚩 Flag 4 – Put Two Things Side-by-Side

Objective: Discover the `Row` widget.

Create a new section containing **two pieces of information beside each other**.

For example:

Age: 21 Birthdate: August 11, 2003

Research:

Row()

Place the Row inside your existing Column.

Your structure should now resemble:

Column

└─ Text

└─ Text

└─ Text

└─ Text

└─ Text

└─ Row

└─ Text

└─ Text

Screenshot:

- Your widget structure/code

```
child: Column(  
  crossAxisAlignment: CrossAxisAlignment.start,  
  children: [  
    Text('Zelon Matthew C. Estimo'),  
    Text('BSIT - 3'),  
    Text('My First Flutter Application'),  
    Text('August 21, 2026'),  
    Text('Hobby: Art & Design 🧐 '),  
  
    Row(  
      children: [  
        Text('Age: 21 '),  
        Text('Birthdate: June 11, 2005'),  
      ],  
    ), // Row  
  ],  
), // Column
```

- The two items displayed side-by-side

Flag 5 – Give It Some Space

Objective: Improve the spacing between your widgets.

Research:

`SizedBox()`

Add appropriate spacing between your:

- Image
- Name
- Course
- Other information
- Row

Challenge: Make the card easier to read **without changing its colors or fonts yet**.

Screenshot:

- SizedBox usage

```
crossAxisAlignment: CrossAxisAlignment.start),  
children: [  
  Text('Zelon Matthew C. Estimo'),  
  SizedBox(height: 8),  
  
  Text('BSIT - 3'),  
  SizedBox(height: 8),  
  
  Text('My First Flutter Application'),  
  SizedBox(height: 8),  
  
  Text('August 21, 2026'),  
  SizedBox(height: 8),  
  
  Text('Hobby: Art & Design'),  
  SizedBox(height: 16),  
  
  Row(  
    children: [  
      Text('Age: 21'),  
      SizedBox(width: 24),  
      Text('Birthdate: June 11, 2005'),  
    ],  
  ), // Row  
],
```

Updated application

🚩 Flag 6 – Make It Look Better

Objective: Apply styling to your individual widgets.

Now that your information is properly separated and positioned, improve the visual hierarchy.

Research how to modify:

`TextStyle()`

Apply different styling to at least **three** elements.

For example:

- Name → larger and bold
- Course → medium size
- Date → smaller
- Application title → italic

Screenshot:

- Your `TextStyle` changes

```
Text(  
  'Zelon Matthew C. Estimo',  
  style: TextStyle(fontSize: 28, fontWeight: FontWeight.bold),  
) , // Text  
SizedBox(height: 8),  
  
Text('BSIT - 3', style: TextStyle(fontSize: 20)),  
SizedBox(height: 8),  
  
Text(  
  'My First Flutter Application',  
  style: TextStyle(fontSize: 16, fontStyle: FontStyle.italic),  
) , // Text  
SizedBox(height: 8),  
  
Text(  
  'August 21, 2026',  
  style: TextStyle(fontSize: 14, color: Colors.grey),  
) , // Text  
SizedBox(height: 8),  
  
Text('Hobby: Art & Design 🎨', style: TextStyle(fontSize: 14)),  
SizedBox(height: 16),  
  
Row(  
  children: [  
    Text(  
      'Age: 21',  
      style: TextStyle(fontWeight: FontWeight.bold),  
    ) , // Text
```

```
Row(  
  children: [  
    Text(  
      'Age: 21',  
      style: TextStyle(fontWeight: FontWeight.bold),  
    ) , // Text  
    SizedBox(width: 24),  
    Text(  
      'Birthdate: June 11, 2005',  
      style: TextStyle(fontWeight: FontWeight.bold),  
    ) , // Text
```

- Updated application

🚩 Flag 7 – Improve the Layout

Objective: Control the alignment of your widgets.

Research the properties of `Column` and `Row`.

Experiment with:

`mainAxisAlignment`

`crossAxisAlignment`

Change the alignment of your content so the card looks intentional rather than simply stacked.

Screenshot:

- The properties you changed

```
child: Column(  
  mainAxisAlignment: MainAxisAlignment.center,  
  crossAxisAlignment: CrossAxisAlignment.center,  
  children: [  
    SizedBox(height: 20),
```

```
Row(  
  mainAxisAlignment: MainAxisAlignment.center,  
  children: [  
    Text('Zelon Matthew C. Estimo'),
```

- Updated application

Flag 8 – Create a Second Card

Objective: Apply what you learned to create another section.

Create a second **Card** containing something different from your profile.

For example:

My Favorites

Favorite Game

Favorite Food

Favorite Movie

The second card should also use:

- Individual **Text** widgets
- A **Column**
- At least one **Row**
- Spacing

Screenshot:

- Code for the second card

```
//Flag 8: CARD 2 - My Favorites Section
Card(
  elevation: 4,
  color:
    ■ Colors.grey[50], // Subtle background tint for distinction
  child: Padding(
    padding: const EdgeInsets.all(16.0),
    child: Column(
      crossAxisAlignment: CrossAxisAlignment.start,
      children: [
        // Card Header
        Row(
          children: [
            Icon(Icons.favorite, color: ■ Colors.redAccent),
            SizedBox(width: 8),
            Text(
              'My Favorites',
              style: TextStyle(
                fontSize: 20,
                fontWeight: FontWeight.bold,
                color: ■ Colors.redAccent,
              ), // TextStyle
            ), // Text
          ],
        ), // Row
        SizedBox(height: 16),
      ],
    ),
  ),
```

- Both cards displayed

🚩 Flag 9 – Stack the Cards

Objective: Arrange your two cards vertically.

You now have:

Profile Card

Favorites Card

Research how to place **multiple widgets inside the Flutter body**.

Use a layout widget to arrange your two cards vertically.

Screenshot:

- The widget containing both Cards
- Both cards visible in the application

🚩 Flag 10 – Widget Discovery

Objective: Discover a Flutter widget independently.

Research the Flutter widget catalog and find **one widget you haven't used yet**.

Examples:

- **Icon**

- Divider
- CircleAvatar
- Chip
- ElevatedButton

Add it somewhere appropriate in your application.

Screenshot:

- Your newly discovered widget in the code

```
// FLAG 10: Discovered Widget - Divider
// This adds a crisp horizontal dividing rule to break up the text
const Divider(
  height: 24, // Spacing space around the divider line
  thickness: 1, // Line thickness pixel count
  color: Colors.grey, // Line color presentation
), // Divider
```

- The widget visible in the application

🚩 Flag 11 – Real Phone Test 📱

Objective: Run your completed application on a **physical** Android phone.

Research how to run Flutter on your phone.

Screenshot:

- Your completed application running on the physical phone (screenshot from your actual phone)

🚩 Flag 12 – Save Your Progress

Objective: Commit your completed Widget branch.

Follow proper standards of commit messages

Screenshot:

- Successful commit
